The way their prop was engineered was able to completely and visually explain the Structure by initially flexing. After the addition of string to eliminate the tension in the support column in their bridge, it was reinforced and capable of supporting the weight of the vehicle on it. This is for the engineering and design in the support column of the bridge. |

| Synopsis: | 9 years of the Structure Challenge. This team has grown into a family and will continue to grow. |
| Text: | This team started in 4th grade, then worked and won together through 9 years of DI. This year's solution centered around a tree; in this case a family tree, the limbs of which held the actual backup Structures and team photos for each of the years. The solution told us how the Structures and photos showed the growth and discovery the team had experienced, with DI playing an important role. This year's solution was great. Finally, the team ended its Presentation, thanking parents and their Team Manager for being there to support them on the journey. DI wants to recognize them for showing us that it is all worth the journey. |
